

Could you create a worksheet with fill in the blank tiles 1-50? With 25% of them filled in already to help guide the student

I've created a fill-in-the-blank number worksheet for counting 1-50 that would be perfect for kindergarteners!

Count 1 to 50 Worksheet

● Guide Numbers ○ Fill In Blanks

1				5					
	12						18		
		23				27			
31				35				39	
			44			47			50

Fill-in-the-Blank Number Worksheet (1-50) for Kindergarten

The worksheet features:

- **Numbers 1-50 arranged in a clear 10×5 grid format** (10 columns, 5 rows)
- **12 guide numbers pre-filled** (exactly 24% of the total), including: 1, 5, 12, 18, 23, 27, 31, 35, 39, 44, 47, and 50
- **38 blank spaces** for students to complete
- **Strategic distribution** of guide numbers throughout the range to provide support at the beginning, middle, and end

The guide numbers are strategically placed to help students recognize number patterns and provide scaffolding as they work through the counting sequence. This worksheet allows kindergarteners to practice number recognition, sequencing, and counting while having enough support to feel confident in completing the task.

You can print this worksheet and have students fill in the missing numbers using pencils or crayons. It's an excellent way to reinforce counting skills and number sequence understanding!
