

1 should be at the top left

Perfect! I've created a new version with the proper hundreds chart format where 1 is positioned at the top left corner.

Number Worksheet 1-100

1				5					10
				15					20
		23				27			30
			34						40
				45					50
	52					57			60
				65				69	70
			74						80
		83				87			90
				95					100

Fill-in-the-Blank Hundreds Chart (1-100) - Proper Format

This corrected worksheet now features:

- **Number 1 at the top left corner** as it should be in a standard hundreds chart
- **Proper row arrangement:** 1-10 (top row), 11-20 (second row), 21-30 (third row), and so on
- **25 strategically placed guide numbers** throughout the chart
- **75 completely blank squares** for students to fill in
- **Clear grid format** that follows the standard hundreds chart layout kindergarteners are familiar with

Now the worksheet follows the conventional hundreds chart format that students typically learn, making it easier for them to understand number patterns and relationships!
